Metropolitan Cabinet Named Distributor of Pressalit Care's Line of Adjustable Kitchen Cabinets and Countertops

Metropolitan will now carry unique track-mounted accessories designed to meet the adjustability needs of commercial and institutional kitchens

East Dennis, MA, September 1, 2015 Denmark's Pressalit Care, Inc., a leading provider of specialized adjustable kitchen equipment, has announced the appointment of Metropolitan Cabinet, a major manufacturer of cabinets and countertops, as exclusive distributor of Pressalit Care products in the greater Boston region. Pressalit Care is one of Europe's leading manufacturers of adjustable bathroom and kitchen solutions for the elderly and people with disabilities.

"We're very pleased about the recent appointment of Metropolitan Cabinet and Countertop as our regional distributor in greater Boston, said Gary Nowitz, president of Pressalit Care, Inc. Metropolitan Cabinet is well established as an innovative, high quality supplier to the residential, institutional and commercial markets, and our company is very compatible with them in terms of our focus on innovative solutions. We look forward to having Metropolitan Cabinet bring our highly innovative new mounting solutions to all the professional tradesmen designing and building top grade kitchens throughout the region."

Pressalit Care designs and manufactures adjustable, track-based mounting fixtures and accessories that enable countertops and cabinets to be easily adjusted to accommodate individuals of different heights. Both electric and manually operated versions are available. With track mounting, residents or staff are able to easily and quickly adjust the height of a countertop, for example, in order to meet their specific height or disability requirements.

According to Stuart Elfland, president of Metropolitan Cabinet and Countertop, "We are delighted to be the first North American manufacturer to showcase Pressalit Care's Indivo line of kitchen equipment. Our Norwood showroom features both electric and manually adjustable systems, providing our customers the ability to witness their unique advantages first-hand. Height adjustability provides a particularly important advantage because, for example, it enables owners and operators of facilities such as assisted living the ability to simply readjust cabinetry heights between residents. This can often eliminate the need to perform costly kitchen reconfigurations."
